Project Dapoer Oma

Tara Ava Angeline (Student Num. 23207180)

About

"Dapoer Oma, meaning "Grandma's Kitchen" in Indonesian, is a heartfelt recipe and blog website dedicated to Indonesian cuisine. As an international student from Indonesia, moving miles away from my home felt daunting. However, one of the things that helped me through studying abroad are recipes from back home, some of which are heirlooms from both my grandmother and mother. To unwind from the stressful college life, I try to recreate some of these recipes in my free time. This website will feature a curated list of Indonesian cuisine recipes and a blog space, where I share my experiences living abroad.

Targeted Audience

Firstly, I aim to connect with fellow cooking enthusiasts who share a love for exploring new recipes. For Indonesians living abroad, I hope to offer a taste of home, providing a culinary remedy for homesickness through cherished dishes and shared experiences.

Secondly, I want to invite those unfamiliar with Indonesian cuisine to explore our rich and wonderful cuisine. With easy-to-follow recipes and personal anecdotes, I hope "Dapoer Oma" can offer a gateway to discovering the diverse and delicious world of Indonesian cooking, right from the comfort of your own kitchen.

Main Website Features:

- Navigation Bar
  I have included a navigation bar to help users navigate through different sections or pages of my website. This navigation bar will provide users with a clear and organized way to navigate through the website, helping them find the information or features they are looking for quickly and easily. To achieve this, I used both CSS and JavaScript to add more interactivity.

- Breadcrumbs
  I have included breadcrumbs to help users understand their current location within my website. The links of previous pages can help users to trail back to higher-level pages, making it easier for users to navigate to parent pages or the homepage.

- Search Bar
  I have included a search bar to help users search through my recipe list. This will help users find a specific recipe they might want to visit. However, this is still a work in progress as it requires some server-side scripting. To achieve this, I used both CSS and JavaScript to add more interactivity.

- Cards
  For my recipes page, I used cards layout as it looks visually appealing and interactive for user. To achieve this, I used grid CSS to help map out my recipes.

- Responsive design
I designed all my website pages to be responsive to different screen dimensions. To achieve this, I used both flexbox and grid in CSS to tailor different elements. I also used the @media properties to help read the different screen dimensions.

- Footer
I included a footer to help users navigate the pages after scrolling to the bottom of the page. It also includes my social media handles to help users connect with me (the author).
